## ORGANISATION

---

Serving the customer in a timely and professional way through the planning, management and physical control of goods incorporated in the processes is the key to success for the company's competitiveness.

There are a number of advantages for our customer, in terms of organisation, reduced distribution time and control of operating costs.

Our approach to logistics is global, but also related to individual services. It is versatile, flexible, reliable and professional, characterised by continuous technological updating of processing procedures and personnel.

We tailor our logistics services to individual situations, taking into account the entire product life: from production to delivery, from collection at the end of the processing line, the management of the warehouse, storage of goods, shipment documentation, up to the loading of the train or articulated vehicle.

We also carry out industrial maintenance, of construction and assembly facilities, across the board. We provide highly specialised professionals and services, developed over more than 20 years of activity.

### AREAS OF INTERVENTION

- Paper sector
- Metalwork sector
- Metallurgical sector
- Pharmaceutical sector
- Agri-food sector
- Beverage sector
- Automotive sector
- Glass sector
- Ceramics sector

### SERVICES OFFERED

#### Physical management of warehouses and plant logistics

We provide various storage solutions, integrating our services with the customer's information system. We operate both in the inbound phase, with order acceptance, quality control, supplier order management and documentation management,

and in the outbound phase, with the setting up and consolidation of orders, picking, packing, manual and automated packaging, components assembly, loading and shipping.

#### Packaging in wooden crates

We build packaging crates of different sizes according to ISPM15 regulations, with the related corrosion protection.

#### Industrial maintenance, construction and assembly

We are specialised in the maintenance of industrial plants, mechanical and metal parts, replacement of rubber and metal tapes, drums, rollers, mechanical revisions for industry. We offer maintenance services related to mechanical parts, metal structures, industrial assemblies and plants.

We are specialised in the installation and maintenance of marine engines for electricity production. Our welding operations and non-destructive tests are RINA certified, while metalwork can be CE marked. We also carry out museum installations.
