## RESPECT FOR THE ENVIRONMENT

---

We offer customised services relating to the processing and disposal of urban waste. This sector requires adequate skills and continuous regulatory updating of our staff, as well as the availability of means of transportation suitable and authorised for transporting waste from the customer's facilities to the point of destination.

At the core of all our actions is the respect for the environment.

The management of ecological and environmental maintenance services is in fact implemented through different specific activities, dealing with urban hygiene, pest control and rodent control.

With regard to the maintenance of green areas, the experience of our dedicated teams allows them to carry out, in public and private contexts, pruning, felling of trees, trimming, weeding and fertilising, collection and disposal of foliage, pest control treatments, design and creation of green areas.

### AREAS OF INTERVENTION

- Private companies
- Public entities
