## CLEANING RESPECTING THE ENVIRONMENT

---

Each space open to the public can generate microbic contaminants that are invisible and therefore more insidious for human health. Removing dust, residues and dirt in general and ensuring microscopic hygiene, eliminating any bacterial or viral pathogen, involves planning, careful inspections and detailed analyses.

Based on the identified needs, we adopt environmental health protocols with standard or special procedures for sanitisation through deep cleaning, remediation and prevention on all surfaces.

Always respecting the environment and life, we also carry insect disinfections, rodent exterminations or expulsions of birds.

We use only highly qualified personnel, able to carry out their duties with the utmost professionalism, combined with discretion and sensitivity.

We study methods and intervention procedures with low environmental impact to offer customers economy and ecology with the same quality level.

### AREAS OF INTERVENTION

- Hospitals and healthcare organisations
- Operating rooms
- Intensive care departments
- First aid structures
- Nursing homes
- Public and private hospitals
- Outpatient clinics
- Healthcare laboratories
- Practitioner facilities
- Offices and Banks
- Supermarkets and Shopping Malls
- Airports
